Abstract (en)

[origin: WO2012045547A1] Described is an apparatus (20) for controlling a hydraulic accumulator (10) of a hydraulic system (12), for example of a vehicle gearbox (14), having a valve device (26) by means of which an accumulator-side port (B) of the apparatus (20) can be connected to and separated from a system-side port (A), wherein the valve device (26) comprises at least one valve main stage (56), said valve main stage being arranged hydraulically between the accumulator-side port (B) and the system-side port (A) and being acted on in the opening direction by a load-exerting means, preferably the pressure prevailing hydraulically at the accumulator-side port (B), and comprises an electrically actuated control valve (52) which can connect the system-side port (A) to a control port (X), which acts in the closing direction of the valve main stage (56), of the valve main stage (56) and to the accumulator-side port (B), wherein at least a first restrictor (60) is arranged between the control valve (52) and the accumulator-side port (B).
