Abstract (en)

[origin: WO2012045567A1] In order to be able to verify, using simple means, the authenticity of a value and/or security document by means of a security feature that is not easily detectable by a user, so that the presence thereof is not normally expected, the invention relates to a method for reading a value and/or security document comprising at least one document layer comprising a first polymer. According to the method, a second polymer different from the first polymer is present in or on at least one document layer of the document. According to the invention, the method comprises the following method step: reading the document by detecting the presence of at least the second polymer by spectral analysis in the infrared range.
