Abstract (en)
[origin: WO2012045540A1] A light-emitting diode module (100) comprising a first component (1) and a second component (2) is provided, wherein the module (100) has a first operating mode (M1) and a second operating mode (M2). The first component (1) has a first luminous flux (P1). The second component (2) has a second luminous flux (P2). In the first operating mode (M1), the ratio of the first and second luminous fluxes (P1, P2) is set in such a way that the module (100) emits a mixed radiation (SG) having a colour rendering index (CRI1) in a range of between 80 and 97. In the second operating mode (M2) the ratio of the first and second luminous fluxes (P1, P2) is set in such a way that the module (100) emits a mixed radiation (SG) having a colour rendering index (CRI2) in a range of between 55 and 70. A method for producing such a light emitting diode module (100) is furthermore provided.
