Abstract (en)

[origin: CN103238925A] The conveyer (1) has lever arms (8) mounted at a rotatory drivable drum (33) in a rotatable movable manner and driven for a rotating movement that is opposite to a rotating movement of the drum at a rotation speed identical to speed of the drum or integral multiples of the rotation speed of the drum. Arms (9) are rotatably mounted at the lever arms, and retainers (10, 11) for rod-shaped products (6, 7) are provided at the arms. The retainers are moved from a crossover point (I) to a transfer point of the products. The lever arms are driven by a swash plate drive.
