Abstract (en)
[origin: EP2626054A1] The hot air or steam bath device has an air circulation channel (147) connected with a supply and distribution chamber (21) through a supply opening (47a). An air circulation unit (45) is provided for circulating the temperate air interspersed with steam generated from a primary temperature control unit (27,27a), and is designed such that the temperate air optionally interspersed with steam contained in the supply and distribution chamber is circulated in the air circulation channel through the supply opening and back into the supply and distribution chamber through an outlet opening (47b).
