Abstract (en)

[origin: EP2626178A1] The cutting machine (1) has rotating circular blade (22) that is provided parallel to a carriage (3) for supporting the material-to-be cut, and is rotated in cutting plane of housing (2). The carriage is swiveled from cutting position to cleaning position. The carriage is connected with a carriage guide supported at machine housing over a saddle base (4). A fixing device automatically and mechanically locks the carriage in cutting position.
