Abstract (en)  
An easily collapsible LED bulb (100) mainly includes a lamp base (10) and a lighting module (20). The lamp base (10) has plural combining holes (13) respectively engaged with plural fixing members (24) of the lighting module (20), so as to fix the lighting module (20) on the lamp base (10). With LEDs (231) deployed on the lighting module (20) and with durable pricy components, such as a power adapter etc. installed in the lamp base (10) and electrically connected with the LEDs (231), it's just necessary to replace the lighting module in case of damage of the LEDs (231) only, without necessity of discarding the whole LED bulb (100). So the LED bulb (100) of the invention is genuinely eco-friendly and economic.
