Abstract (en)

[origin: EP2626645A1] The unit has a plug body (12) in which an electrical contact element (20) is arranged, where the element has a connecting terminal (28) for receiving a connecting wire (36). The plug body is made from plastic, and has a receptacle (40) for retaining an opening element (42) in a removable manner. The plug body forms a coupling section (14) at an axial end (13). The receptacle is arranged relative to the connecting terminal such that the opening element works on the terminal and holds the terminal in an opened condition when the opening element is inserted into the receptacle. The connecting terminal is designed as a spring terminal.
