Abstract (en)

[origin: WO2012049011A1] The invention relates to a method for operating a cleaning appliance which comprises a control device and at least one cleaning element, which is intended for cleaning a surface and has a memory element, wherein the control device comprises a control memory cell and the control device is connected to a reader for reading out the memory element. In order to develop the method so as to reduce the risk of the user accidentally using an unsuitable cleaning element, it is proposed according to the invention to store, in the memory element, data which is characteristic of the type of cleaning element and which is read out, and evaluated, over the time period starting from when the cleaning appliance is started up until the beginning of the cleaning action of the cleaning element. Also proposed is a cleaning appliance for implementing the method.
