Abstract (en)

[origin: WO2012049024A2] The invention relates to a hand-held electric tool (100) having a tool housing (105) in which is disposed gearing (170) for transmitting torque generated by a drive motor (180) to a drive spindle (120) with which a spindle-locking device (250) is associated. The drive spindle (120) is rotatably mounted in the tool housing (105) at at least two mounting points (132, 134) which are provided in the tool housing (105) in a region downstream of the gearing (170), and the spindle-locking device (250) is disposed in the axial direction of the drive spindle (120) between the two mounting points (132, 134).
