Abstract (en)
[origin: WO2012049520A1] A power trolley system suitable for carrying cans can be controlled by a carrier control unit (82). The control unit (82) can comprise a processor operable to receive via a wireless channel position data describing a present position of the carrier within a power trolley system; receive via the wireless channel target position data describing a target position for the carrier within the power trolley system; receive via the wireless channel distance data describing a relative position of a further carrier within the power trolley system; and provide movement control data to a drive unit to cause the carrier to move from the present position to the target position..
