Abstract (en)
[origin: CA2812375A1] The invention relates to a reclosable pouring element (1) for liquids that are contained in packages (6), in particular liquid food, comprising a main part (2) that has a pouring opening (7), an external thread (9), and a flange (5, 5") for connecting to the package (6); a cutting ring (3) that has a blade (14) and a protrusion (13); and a screw lid (4) that has an internal thread (11) and a driver (12), said pouring opening (7) being closed by a barrier film (18). The aim of the invention is to achieve an improved protection of the barrier film (18) against damage while still ensuring a reliable opening function of the pouring element. This is achieved in that the main part (2) has a support wall (16) against which the barrier film (18) lies.
