Abstract (en)
[origin: WO2012049668A1] A container (2) with a repositionable closure device (1), wherein the container (2) comprises a lateral wall (L) having an upper edge (B) and wherein the closure device (1) has a stiffening member (4) which is stably coupled to a sheet- like cover member (3), the sheet- like cover member (3) having an outer peripheral portion (3") designed to be coupled to said upper edge (B) of the container (2) and an inner portion (31) coupled to the stiffening member (4). The stiffening member (4) partially overlies the edge (B) of the container (2), the outer peripheral portion (3") of the sheet- like cover member (3) being at least partially separable from the inner portion (31), while the latter is held integral with the stiffening member (4) to define a repositionable lid.
