Abstract (en)
[origin: CA2845873A1] The invention relates to a device for retaining doctor blades, comprising a base plate and a cover plate, said plates being pivotably connected together by means of a pivot bearing and the doctor blade is fixed to the cover plate. An expandable tube is arranged respectively on both sides of the pivot bearing between the base plate and the cover plate, said pivot bearing consisting of a radially supported bearing axis and a receiving element for the bearing axis, said bearing axis being fixed either to the base plate or the cover plate and the receiving element being fixed to either the cover plate or the base plate.
