Abstract (en)
[origin: WO2012052013A2] A device for connecting two, in particular panel-shaped, components (20) by means of a tongue-and-groove connection (45), wherein the components (20) to be connected have a groove (25), wherein a connecting element (46) which has the tongue (23) is arranged on a support (1) supporting the components (20), device for the flush connection of two components (20) by means of a tongue-and-groove connection (45), wherein the components (20) to be connected have a tongue (23), wherein a connecting element (46) which has the groove (25) is arranged on a support (1) supporting the components (20), and a modular support structure, in particular bridge (5), with side elements (2, 3) which are connected to each other via supports (1), wherein bearing elements, which, as the components (20), are connected to each other by a component connection of this type, are arranged on the supports (1).
