Abstract (en)
[origin: WO2012059096A1] The invention relates to a modular bridge comprising lateral elements (2, 3) which are interconnected in the longitudinal direction, and traverse beams (1) which connect the lateral elements (2, 3) in the traverse direction and bearing elements (20) which are arranged such that they form a traffic lane on the traverse beams (1). The invention relates to a method for constructing a modular bridge in which lateral elements (2, 3) are interconnected in the longitudinal direction and said lateral elements (2, 3) are interconnected by traverse beams (1) and bearing elements (20) are arranged such that they form a traffic lane on said traverse beams (1). The invention also relates to modules for forming a modular bridge with lateral elements (2, 3) which can be interconnected in the longitudinal direction and with traverse beams (1) for connecting the lateral elements (2, 3) in the traverse direction and bearing elements (20) which can be arranged such that they form a traffic lane on the traverse beams (1).
