Abstract (en)
[origin: EP2628688A1] The bin (1) has a lid (4) articulated in rotation with a vat (2). The lid swivels until reaching an opening configuration in which the lid is maintained in an opened position when the lid is raised to open the bin. An angle defined by a bottom (20) of the vat and a plate (400) of the lid and angle defined between the bottom and the lid are strictly higher than 90 degrees and lower than 180 degrees. A free edge of a peripheral wall of the lid abuts against a free edge of an external part of an edge (231) of the vat, in the opening configuration.
