Abstract (en)

[origin: EP2628829A2] The equipment (1) has delivery upper rollers (11o) connected to outlet upper rollers (40) over a cage element (25) that comprises a guiding and receiving unit (29), where a clearance diameter of the receiving unit is greater than a diameter of an axle (13) of the outlet rollers. The cage element is mounted at the outlet rollers. An end of a load spring (15) i.e. leaf spring, is connected to a pendulum support (5). An opposite free end of the load spring is connected with the cage element retaining the delivery rollers via a movable connecting link (16), an axle (17) and a control lever.
