Abstract (en)

A spring loaded container (100) for achieving a flush of a toilet bowl comprises a main body (110). A piston (120) is reciprocally situated in said main body and loaded by a spring (140) such that the piston will exert a force on water housed within the main body. The spring loaded container further comprises an inlet (210) and an outlet (150), the outlet (150) being connected to the toilet bowl. Holding means (200) are designed to hold the piston in a position corresponding to a maximum volume of water being housed within the main body.
