Abstract (en)

[origin: EP2628877A2] The module has a locking bolt (22) and a lock casing (21) covering a frame (11) of a wing (1) such that the lock casing is used in an accommodation aperture in the wing. A flexible guiding device is provided and axially arranged in the locking blot. The flexible guiding device is arranged with a closed body end at or in a connection unit of the lock casing, and extends with a closed end remote box by a free end of the locking bar. The locking rod protrudes at one free end of the wing through an opening (11d). The flexible guiding device is selected from one of wire, bowden cable and chain.
