Abstract (en)

[origin: EP2628883A2] Embodiments of the present invention provide a glazed closure for an opening, said glazed closure may resist movements of frame elements of glazed closure relative to a glaze assembly in some directions while allowing movements of frame elements relative to glaze assembly in other directions. Glazed closure according to embodiments of the present invention may comprise at least one frame element; at least one glaze assembly comprising at least one glaze, and at least one support element; at least one insert; and at least one fastening element to fasten frame elements to inserts affixed to glaze assembly, to prevent detachment movement of frame elements relative to glaze assembly. The insert may comprise a cavity to receive an end of the fastening element.
