Abstract (en)  
[origin: EP2628939A1] The valve (1) has a control valve (2) that controls a flow through an outlet throttle (10) in a control space (20). A movable shut-off element (23) divides the control space into two control space portions (21,22). The outlet throttle and an inlet throttle (9) in the control space are opened into the control space portion (21). A nozzle needle (5) is controlled over the control space pressure in the control space portion (22). The direct connection between outlet and inlet throttles is blocked by shut-off element over control space portion (21) in a shut-off position.
