Abstract (en)
[origin: EP2629007A2] Provided is a combustion apparatus, including: a fire chamber for combusting wood pellets; a thermoelectric power generation module disposed outside the fire chamber for generating power based on a temperature difference caused by heating with an internal temperature of the fire chamber and by cooling with an external temperature outside the fire chamber; and an electric drive means (an exhaust fan, a blast fan, a drum-type pellet supply system, an ignition heater, an air supply fan) which operates using, as a drive force, thermoelectric power generated by the thermoelectric power generation module.
