Abstract (en)

[origin: US2013177250A1] An image processing apparatus in accordance with an embodiment receives a setting related to a common image processing to be executed on each of a plurality of process target areas; receives a setting of a reference area for defining the plurality of process target areas on an input image; and receives a setting for regularly defining the plurality of process target areas using the reference area as a reference. In accordance with the setting related to the common image processing, image processing is executed on each of the plurality of process target areas, and a result of overall process reflecting the results of image processing of respective ones of the plurality of process target areas is output.
