Abstract (en)  
Multiple socket-outlet, comprising a plurality of socket-outlets or voice and data outlets arranged in a face of the base, characterised in that a face of said base comprises guiding means (3, 4) for guiding at least one cable (10) of a plug (9) or connector which is connected to one of said socket-outlet (1) or voice and data outlets. Thanks to this feature, the wires of the plugs or connectors that are plugged or connected to the multiple socket-outlet can be neatly organized and separated without the possibility of becoming entangled with each other and interfere with each other.
