Abstract (en)

[origin: WO2012051646A1] In a twin roll continuous caster, the contour of the strip cast is controlled during casting by regulating the temperature of temperature-regulating medium circulated through temperature-regulating passage or passages in the casting rolls spaced inward of cooling passages in the circumferential portion adjacent the casting surfaces. The temperature-regulating passage or passages may be positioned in the circumferential portion or in the inner portion of the casting rolls, or both.
