Abstract (en)

[origin: WO2012052274A1] The invention relates to a device for securing an essential component (40), in particular a lock cylinder, a lock cylinder catch or the like, of a handle of a motor vehicle, the device having a carrier (10), which can be secured on the inside to a movable part (41), in particular to a lid, tailgate or door. According to the invention, a blocking unit (20) is arranged on the carrier (10) and comprises movable gear elements (21, 22), by means of which the blocking unit (20) can be moved between a blocking position (1) and a release position (2), the component (40) being located in a detached manner in the carrier (10) in the release position (2) and the component (40) being held securely on the carrier (10) in the blocking position (1).
