Abstract (en)  
[origin: WO2012052027A1] An insert for an electrical fitting is described, the insert suitable for being placed in a ceiling. The insert comprises a housing and an electrical circuit element flexibly coupled to the housing. The insert also has a ventilation device which is arranged to intake air from the area around the electrical circuit element, and output it into the interior of the insert housing. The insert accordingly acts to cool both the electrical circuit element and any electrical fitting contained within the interior of the housing. A mounting collar for mounting an insert in a ceiling is also described, and a method for installing an insert using such a collar.
