Abstract (en)

[origin: EP2630881A1] A system of visual markers is described for fastening and digitizing garment patterns on a flexible board, with magnetized blocks (20) for fastening the patterns (40) to the magnetic surface of the board, and visual markers (30) for identifying metadata on these patterns (40) during digitization by a specific computer program. The visual marker (30) is preferably quasi-isotropic, and has a single peripheral mark (31) for identifying the angle of rotation of the annotation in relation to a Cartesian plane, and a visual symbol (32) that identifies the type of annotation. The visual marker (30) is optionally associated with the magnetized blocks (20) for fastening the patterns, and allows the display of additional information on the pattern being digitized.
