Abstract (en)

[origin: EP2631152A1] The method involves selecting to-be-managed resources. An establishment of contact is performed by a cellular radio system with the functional registered mobile terminals of the selected resources. The radio cells assigned to the selected resources are determined in the cellular radio system or in the mobile terminals. The positioning of the selected resources is completed by association of the determined radio cells to an operating point of the railway system. An independent claim is included for device for management resources.
