Abstract (en)
A bag (100) for storing items, comprising a plurality of compartments (106-115) and an opening / closing mechanism (101, 102, 151, 152) for opening / closing each of the plurality of compartments. The opening / closing mechanism is a zipper comprising two sliders (101, 102) whereby each of the plurality of compartments can be accessed individually without opening neighbouring compartments. Consequently, by allowing the compartments to be accessed individually without risking items stored in the other compartment falling out, a bag that is easier to operate is provided.
