Abstract (en)
[origin: EP2631387A1] The awning has two side flanges (1) arranged on a base portion, between which a cloth shaft (3) is rotatably mounted. A vibration decoupling device (50) is arranged completely inside the cloth shaft between a drive motor (5) and the side flange. A radial damping element (16) made of a flexible vibration damping element stands in engagement with a support head (11) in the rotational direction in a form-fit manner. A bearing head (19) is rotatably arranged at the side flange, which stands in engagement with the radial damping element in the rotational direction in a form-fit manner.
