Abstract (en)

A guide assembly, for curtains, awnings and similar devices, comprising at least one contoured profile (2), which can be positioned substantially proximate to an area to be covered; the profile (2) longitudinally defines a guide channel (3) for a slider (4) which is integral with a transverse bar (5), which in turn is fixed to at least one slideable sheet of the curtain, of the awning or similar device, for the guided movement of the sheet and the covering of the area; the bar (5) further comprises a shaft (6) that is rigidly fixed to the sheet and at least one end cap (7), which is associated slideably with the shaft (6); the slider (4) is fixed to the cap (7), for the forced translational motion of the slider (4), with respect to the shaft (6), in the event of maladjustments of the profile (2) with respect to the ideal direction of sliding of the sheet.
