Abstract (en)

[origin: EP2631391A2] The support (1) has a profiled element (3) e.g. metal profile, including an upper end (4) with a recess i.e. semicircular opening, and a lower end (5) with a holder (7). A linkage (8) is bent into a Z-shape. The linkage is mounted at the profiled element so that the support is fastened and secured at a wall formwork element (2) by rotating the linkage by a rotating lock stop. The linkage includes an upper part, a center part and a lower part so that lower part of the linkage is slid below an edge of the wall formwork element such that a clamping action is achieved. An independent claim is also included for a method for mounting a guide rail support at a wall formwork element.
