Abstract (en)
The present invention concerns a LED lighting device comprising a LED (4), a support body (2) for the LED (4), power supply means (17) for supplying power to said LED (4), a securing device (3) comprising a support element (18) for supporting said power supply means (17), said support element (18) comprising a first support element (18A) and a second support element (18B), which are mutually associated to allow rotation of said first support element (18A) relative to said second support element (18B) about a preset axis of rotation (7); The device is characterized in that the power supply means (17) include first power supply means (17A) in rotatably joined relation to said first support element (18A), second power supply means (17B) secured to said second support element (18B), said first power supply means (17A) and said second power supply means (17B) being in electrical communication with each other, to supply power to said LED (4) even when there is a seamless rotary movement of said first support element (18A) relative to said second support element (18B).
