Abstract (en)  
[origin: EP2631577A2] The apparatus has a refrigerant circuit comprising a vaporizer for refrigeration of a cooled compartment. The vaporizer is partially arranged in the compartment or provided in heat conducting contact with the compartment. An emissivity reducing unit and radiation screens (60) are partially or completely provided in walls of the compartment, a compartment element and/or outer walls of an apparatus body (10). The reducing unit reduces emissivity of the wall of the compartment. The screens partially reflect a thermal radiation from the wall, a component and/or a cooled inner space (20). The vaporizer is designed as a roll bond vaporizer. The apparatus comprises a base material with additives selected from metals, plastics, ceramics or metal oxides.
