Abstract (en)
[origin: EP2631586A2] The closure (1) has a locking rod (4) that is formed between lock case (2) and closure sleeve (3) so as to connect chamber facing the bolt head with a bolt handle (5) by a chain link (6). The chain link is articulated pivotably on the locking rod and the bolt handle. The bolt handle is moved between an open and a closed position of the closure. The lateral recess (10) of bolt handle is overlapped in closed position. The articulation axis (7) of the chain link in the bolt handle is coincided with the longitudinal axis of the closure.
