Abstract (en)  
The present invention relates to a transformer arrangement comprising a substrate (1) and a secondary winding formed by arranging the substrate with at least one conductive clamp (2) protruding from the substrate, the two ends of which clamp are connected by means of a conductor (3) in the substrate. The arrangement further comprises a primary winding (4) and a transformer core (7) arranged inside the primary winding, wherein a first electrically insulating structure (8) is arranged between the primary winding and the core.
