Abstract (en)

[origin: EP2631996A2] The system has facade elements (2), and a sub-structure for supporting the facade elements and fastened to a vertical wall (5) of a building. The sub-structure has a horizontally arranged separating element (7) that extends across entire width of the system for separating a free area (6) between the facade elements and the wall into chambers (8) arranged one above the other. A ventilation opening (9) running in a vertical direction is arranged between the facade elements such that air flow flowing through the chambers is directed to the outside via the opening in a mounted condition.
