Abstract (en)

[origin: EP2632170A2] The device (9-11) has sensor (12) having measurement component (13) connected to evaluation component (14). The sensor locates leaks in the water lines (2,3) via an acoustic detection of the sounds of the flow and/or the pressure and/or the flow rate. A communication link (17) for transmitting the received signal and/or data to display (21) of a user terminal (20) allocated with internet browser is designed as wireless local area network (WLAN) or WiFi connection between the leak locating device and the user terminal.
