Abstract (en)  
[origin: WO2012056483A1] The present invention concerns an apparatus for physical exercise comprising at least one handle (200), vibrating means (5, 201, 204) being coupled to said at least one handle (200), the apparatus being characterised in that said vibrating means (5, 201, 204) is connected to a processing and controlling device that is housed in a control panel (209) and in turn connected to interface means (210) for inputting data capable to set a vibration frequency of said vibrating means (5, 201, 204), said at least one handle (200) comprising first sensing means (218) capable to detect a vibration frequency of said at least one handle (200) and to send detection data to said processing and controlling device, said processing and controlling device controlling an operation of said vibrating means (5, 201, 204) so that the vibration frequency detected by said first sensing means (218) is equal to a vibration frequency set through said interface means (210).
