Abstract (en)

[origin: WO2012055803A2] The machine for manufacturing metal cages comprises an operating station (10), having a fixed position and provided with a first rotating member (11) suitable to support passing a plurality of longitudinal bars in the fixing position for forming the cage, and a mobile head (20), suitable to be actuated with a shift motion in a direction axial to said forming cage and provided with a rotating member (21) to which are made integral respective ends of the bars. Respective motor members (46, 26) are suitable to actuate in synchronous rotation the rotating members (11, 21), in suitable phase relation with the shift motion of the mobile head (20). The rotating member (11) of the fixed station (10) is carried suspended at an end of an axial shaft (40), carrying integral at least one support element (30) of the bars and suitable to be actuated in rotation at the opposite end by respective motor members (46).
