Abstract (en)

[origin: WO2012056046A2] The invention relates to a transportation unit for transport of foodstuffs that are highly viscous or solid at ambient temperatures. The transportation unit comprises a first bag, a second bag arranged to fit into the first bag, and one or more hoist bands wrapped around the bottom side of the first bag and connected thereto. The first bag has an upper side and a bottom side, and is made from a woven fabric, preferably a woven polymer. Additionally, the first bag comprises a transfer opening for removing the foodstuffs from the transportation unit. The second bag comprises an opening for inserting and/or removing the foodstuffs. The second bag is capable of transporting more than 2000 kg of foodstuffs. The one or more hoist bands form loops above the upper side of the first bag.
