Abstract (en)

[origin: WO2012057680A1] The present invention concerns a roller for a belt transporter comprising a body that is mounted in bearings on an axis of rotation such that it can rotate. The body comprises measurement sensors for registering measured values of the roller, and an electronic arrangement that transmits and receives signals. The invention concerns also a system for monitoring a roller, a method to be used in the system, and the use of a roller.
