Abstract (en)

[origin: WO2012056446A1] The invention is a system and method for dispensing T-shirt type plastic bags singly by means of an automated dispenser. At the push of a button or other control means, a single bag is partially ejected from the machine, whereupon the user can take the bag and use it. The device has detectors for detecting fault conditions (such as bag depletion, wrinkled bags, and the like) as well as display means such as an LCD for displaying ads or other information to users.
