Abstract (en)
[origin: WO2012055761A1] An apparatus for buffer-storing a plurality of goods or goods groups comprises a buffer-storage section (204) which is configured to receive a plurality of goods or goods groups. Furthermore, a buffer-storage transport means (209) is provided which is configured to move a goods item or a goods group at a buffer-storage transport speed. An exit (212) is configured to discharge a goods item or a goods group out of the apparatus at an exit speed which is higher than the buffer-storage transport speed. Furthermore, the exit (212) is configured to take over the transport of a goods item or a goods group before the goods item or the goods group has reached an end of the buffer-storage section (204; 400).
