Abstract (en)
[origin: WO2012055522A1] The invention relates to a lifting wall device, comprising a holding system and a lifting wall which is coupled to the holding system in a height-adjustable manner via a guide. The invention addresses the problem of indicating a lifting wall device which can be produced economically and cost-effectively and in which tilting of the lifting wall is prevented such that the lifting wall can be transferred between a raised position, in which the lifting wall opens up an opening located between the telescopic guides, and a lowered position, in which the lifting wall closes the opening located between the telescopic guides.
