Abstract (en)

[origin: WO2012055790A1] The invention relates to a heat exchanger (10) comprising an assembly of plates (12) which are stacked in pairs in a longitudinal stacking direction (x) to form a heat-exchanger body (14) that is intended for the circulation of a fluid, comprising a connection device (19) arranged at one end of the heat-exchanger body (14) along the longitudinal stacking direction (x). The connection device (19) comprises an end plate (20) and a cover (22) which are designed to be assembled together so as to jointly define an inlet duct (24) and an outlet duct (26), said ducts being intended for admitting the fluid into the heat-exchanger body (14) and for discharging the fluid out of the heat-exchanger body (14), respectively.
