Abstract (en)
This invention concerns crampons, specifically technical crampons suitable for all types of sole, irrespective of their asymmetry or rolling. In greater detail, this invention concerns a crampon (1) made up of a front plantar element (2) and a rear plantar element (3) joined to form a support surface area for the sole of a boot (S), characterized by the fact that the rear plantar element (3) includes a heel section (20b) and a connecting device (20a) with said front plantar portion (2), in which the heel section (20b) comprises a rear flat section (22) step-like connected to the connecting device (20a) via a rise (23).
