Abstract (en)

[origin: EP2634002A1] The method involves removing a film (2) for a head lid from a supply roller (4) and supplying the film to a forming station (10) for the head lid. A film (3) for producing a capsule shell is removed from another supply roller (5) and supplied into the forming station for the capsule shell such that the latter film is formed into the capsule shell. The capsule shell and the head lid are joined to a finished capsule. One of the films is removed without printing, and printed and shaped during supplying to the forming station in a printing station (11) e.g. inkjet print station and inkjet printer. An independent claim is also included for a device for manufacturing capsules.
